7-port long header manifold Close manifold, premanufactured unit suggested for socket fusion. 2" inlet x (7) 1" ports. Conceptual, not to scale. IGSHPA standardized reducing manifold configuration to reduce effort for purging, maintaining flow balance. Pipe to be DR11, HDPE, rated for GeoExchange installations, confirm ASTM cell classification against IGSHPA minimums.

Seven port 'long header', light commercial or residential manifold for vertical ground loop installations. Port spacing as per distance between borehole circuits.
